Preconnected origins

preconnect hints help the browser establish a connection earlier in the page load, saving time when the first request for that origin is made. The following are the origins that the page preconnected to.

Origin	Source
https://fonts.googleapis.com/	head > link <link rel="preconnect" href="https://fonts.googleapis.com">
https://fonts.gstatic.com/	head > link <link rel="preconnect" href="https://fonts.gstatic.com" crossorigin="">

Preconnect candidates

Add preconnect hints to your most important origins, but try to use no more than 4.

No additional origins are good candidates for preconnecting

○ Layout shift culprits

Layout shifts occur when elements move absent any user interaction. Investigate the causes of layout shifts, such as elements being added, removed, or their fonts changing as the page loads. CLS Unscored
